

Education Training and Research

Foundation QA is active in providing education and training services to assist in the development of young engineers, particularly in the field of high strain dynamic pile testing. These services are provided through FQA's sister company, Foundation QC.

Foundation QA also offers mentoring relationships with dynamic pile testing companies across the world to assist them with the development of their own experience. This is a cost- and time-effective alternative to developing and maintaining full-time in-house expertise.

Through his position as Honorary Associate of the Department of Civil Engineering at Monash University, Dr. Seidel participates in both undergraduate and postgraduate education, training and research.
